

USGP Intro Call Transcript & Call Breakdown

Internal - reconstructed from an untagged transcript; speaker attributions are best-effort.

Here's the call breakdown. Note: the raw transcript has no speaker tags, so I've attributed lines based on context clues (names mentioned, roles, topics) — treat attribution as best-effort inference, not verbatim-confirmed.

Participants

NetSuite (vendor):

Stephen Bacall – AE, ~4 years at NetSuite, ran the call

Armand – Stephen's counterpart/colleague

USGP (prospect) — government contract staffing/services firm, ~20 years in business:

Joshua Graves/Graham – CEO/President (joined late, driving)

Angela – COO (never actually joined)

Stacey – HR Director

Shannon – Director of Recruitment

Vincent – Director of Business Development

Isaac Dave – Credentialing Director

David Tucker – Finance/Accounting

Lee Metcalf/Metacraft – Security / Field Service Officer (handles IT-adjacent, CMMC)

Mary Ann – Josh's assistant

Matt / "the other Matt" / Jason – referenced but not clearly on the call (IT/compliance side, mentioned re: FedRAMP/CMMC)

Full transcript (speaker-attributed, reconstructed)

[Pre-call small talk — Armand/Stephen with Stacey, Shannon, David]

Armand: Being remote, nice. Have y'all been growing? Seems like y'all have been around for some time.

David/Stacey: Oh yeah, when I started 10 years ago we had maybe 80 total employees, now we have a little over 800.

Armand: That's definitely quite the growth. What would you attribute that to — government being more fruitful, or...?

Rep (USGP): No, just hard work from the team, winning more contracts and growing that way.

Stephen: Terrific, excited to dive in. Let me know when your full team's here, I'll kick us off then.

USGP rep: Yeah, we're missing quite a few, they should be getting on pretty soon.

Stephen: Not a worry, we've still got time. Stacey, seems like you're more HR/recruitment?

Stacey: I'm HR. Shannon is recruitment.

Stephen: Wonderful — Hey Shannon, good to meet ya.

Shannon: Good to meet y'all too. How are y'all living? I'm in accounting [misattribution — likely David]. You like living in Austin?

Armand: I love it, for young professionals and tech it's one of the more desirable places. I'm actually French, family's from Paris, grew up in Miami, graduated University of Florida in Gainesville, moved here right after. How's San Antonio?

Shannon/David: It's okay, a little boring at times. That's why I've been looking at places near San Antonio that might be more lively — always loved Austin, wanted a good opinion on what it's like living there.

Armand: You're just a stone's throw away. Quitting your job, Shannon? Moving to Austin?

Shannon: Never. I'll be at this job until the building blows up, sir.

Joshua Graves (joining): Hey guys, I'm gonna go ahead and introduce myself real quick — Joshua Graves, owner. I've got several other people helping us see how this thing could work and how it might benefit the station. I'm gonna tap out and turn video off, I'm driving — should be at my destination in about 10 minutes. Had a meeting run long, apologize for that.

Stephen: No, terrific Josh, thanks for the intro and for including your team. Excited, hopefully a productive conversation.

[Logistics chatter — meeting time mix-up, confirming attendees]

David: [confirming he's in accounting] My last company was a construction company, we used NetSuite for a time — actually they used it before I came, I was pulling historical info out of it.

Stephen: Well, there you go. Looks like we could get the gears turning. Seems like we have a pretty full squad — should I give it a go? Executive team on the call, we're good to go.

Stephen: Wonderful, thank you all for taking the time. My name is Stephen Bacall, joined by Armand, my counterpart. I've been at NetSuite about four years. Goal for today: learn more about you folks, the business, the role, growth over the past few years — sounds significant per Stacey. Take a deeper look at current processes, software landscape across departments, how it ties together, then touch on NetSuite's value, wrap with next steps and questions along the way. Sound like a good plan, or anything else you wanted to cover?

Josh (or team): Sounds perfect.

Stephen: Let's do quick intros so I know who to direct questions to.

Joshua Graves: Joshua Graves, CEO/President of USGP.

Stacey: Human Resources Director.

Shannon: Director of Recruitment.

Vincent: Director of Business Development.

Isaac Dave: Credentialing Director.

David Tucker: Finance.

Lee Metcalf: Security.

Mary Ann: Josh's assistant.

Stephen: Angela's our COO — I don't know, I believe she is, on the phone... [Josh:] She's our COO, she may have been tied up with something.

Stephen: Terrific. My understanding — you folks conduct services, main customer is government. Using QuickBooks Online for finance/accounting, maybe integrated to Monday.com for project management/CRM-style stuff, and Paycom for HRIS/payroll. Fair understanding? Any other periphery systems?

Josh: Before we dive in — Excel. Excel's built a lot of what we've done. We're a homegrown place, 20 years in business, everybody's grown into their roles. Trying to get systems in one house instead of searching three different houses for data.

Stephen: Wonderful. Single entity/EIN, or multiple entities? Noticed 8(a) contracts.

Josh: Single EIN, but joint venture with a total small business, and another JV with a service-disabled veteran-owned business. Our business is itself service-disabled veteran-owned — we were prior 8(a), graduated the program.

Stephen: Congratulations. What's the full scope of services — facility support, physician, nursing?

Josh: From front-end administration to a cardiothoracic surgeon — all staffing requirements fall into contract labor we bid on/procure/service if awarded.

Stephen: Is a lot of that managed in Monday.com?

Josh: Lee Metcalf is our field service officer, past recruitment director, now doing IT-type stuff — introduced us to Monday. I'm just getting on Monday myself. Yes, lot of stuff in Monday but not everything. Pieces in Paycom, pieces in Monday, everything in between on Excel. Stacey, right?

Stacey: Yeah — Paycom, HR doesn't use Monday much; all tracking, government reporting, workers' comp, FMLA, compliance is in Paycom. Other teams (recruitment, credentialing, PMs) use Monday for hours tracking, candidate pipeline status.

Stephen: You mentioned compliance — are y'all subject to DCAA, ITAR, or FedRAMP?

Josh/team: Negative. [confusion/discussion among Josh, Lee, Matt about FedRAMP vs CMMC] Not mandated for DCAA auditing/reporting to government.

Stephen: Either way, that's something we support/have functionality for. Are contracts typically fixed bid, T&M, cost reimbursable, or a mix?

Josh/Vincent(?): Pretty much fixed price. There's a new wave with DHA/OASIS — blanket purchase agreements possible in future, but currently fixed. Contract labor hours currently paid by the [hospital/lab]; had one situation (coders) requiring supply purchases plus labor, so cost structure could vary going forward.

Stephen: When I speak with orgs like yours coming off QuickBooks, value is usually around contract-level labor/costing, billing, and auditability. Is that something you're struggling with, massaging Excel to understand?

David (Finance): I just get the edge reports. Billing done within QuickBooks — since labor-hour contracts, not too difficult, no pools to deal with, pretty simple accounting.

Stephen: Direct and indirect contract labor costs tracked separately?

David: Yes, divided between direct and indirect. Direct cost like travel; most cost is labor or subcontractor labor.

Stephen: Can you trace an approved employee hour (via Paycom) back to the exact contract/task order/facility/invoice line?

David: Yeah [confirms, brief].

Stephen: Where do you see NetSuite plugging in, or where are the friction points?

Josh: Dave's the only one with NetSuite knowledge from a past life. My pain point — why I reached out to Scott via LinkedIn for this call — is wanting one place to get all info to make sure everything's running right. Having to dive through Monday, interpret everyone's version of an Excel spreadsheet, get Stacey to give updated reports. Want one central, live source of truth to eliminate having to chase people down.

Stephen: That's table stakes for us — Monday.com and Paycom/Paylocity integrations are advertised, we're partners with major payroll/HRIS providers. NetSuite would serve as your GL — replacing QuickBooks. Ideally we integrate with existing best-of-breed systems (Paycom, Monday) rather than replace them; phase one typically just addresses accounting/financials, though we do have native PM/CRM/payroll offerings too. Heartbeat of business stems from GL — industry-specific KPIs, dashboards, reports. Curious about AI appetite too. What reports/KPIs are you tracking? Approval workflows?

Josh: The "50,000-foot view" I want: applicant/candidate data → credentialing → onboarding workflow → time management → issues to HR, all in one line. Know in real time where Joe Smith (new hire) is in the process. Tight government deadlines: 30-day window for non-credentialed hires, 60-day for credentialed — held to that number. Want data readily available instead of manual Excel/Monday relay.

Stephen: That's within our native offering — integrating those two periphery systems eliminates Excel-based reporting/duplicate entry/errors. Transparently, NetSuite is a significant step up in functionality from QuickBooks — and cost. Want to make sure we're aligned there.

Armand: Starting annual licensing costs around \$40,000–\$50,000 depending on users. Does that cut the conversation short, or in line with expectations?

[Josh has audio/car trouble, asks someone to repeat]

Stephen: [repeats] Cost — would \$40–50K annual licensing plus roughly equivalent one-time implementation cost be a deal breaker? Part of that covers our professional services team — data cleanup/mapping, user acceptance testing, white-glove onboarding. ~80% of our customers come off QuickBooks, so you're in a good spot. Curious what you're projecting revenue-wise, so I staff this right.

Josh/David: This year should do \$85–90M, projected to hit \$100M next year. About 750–830 employees/workers total (W-2 and 1099, fluctuating).

Vincent(?): Does that include new hires from this year's newly awarded projects?

Josh: Not included — those are just current real-time workers on the books. Talked to Angela yesterday about a split — could be +100 individuals from new awards. Tack that onto the total.

Josh: Government hasn't even started sending mass volumes of work until last week — they're dumping it now through end of September, so more work coming. Is this scalable? How hard to grow with this system?

Stephen: I typically work with growth-mode organizations — NetSuite is designed to scale. Armand and I will send resources illustrating that; we support companies from \$10–20M revenue up through publicly traded companies.

Stephen: Do you have a managed service provider or internal IT staff?

Josh: Hybrid — outside service provider helps with maintenance/CMMC requirement; Lee Metcalf is building the backbone internally too.

Stephen: Out of curiosity, what CMMC level are you?

Josh: I believe it's two.

Stephen: Couple other points — tracking fixed assets, depreciation schedules, maintenance schedules?

Josh/Stacey: Not really, not much. Corporate side is small (~30–35 corporate staff) — IT only covers corporate, field facilities handle their own stuff; we're not their IT.

Stephen: Similar for inventory management — no hand in that?

Stacey/Josh: Just corporate side, maybe one contract requiring uniform tracking, nothing else field-side.

Stephen: NetSuite's modular — inventory/item management and native CRM come standard if ever needed. Any other pain points — procurement, blanket POs?

Josh: No — purchasing isn't in-depth, mostly labor cost, no real supplies, don't use a PO system. When we say procurement we mean labor procurement/contracts.

Stacey: That's right — what Josh is really interested in is integrating Shannon's recruiting data with tracking. Want to drill down so Josh can see in real time: recruitment has X candidates, credentialing has taken them to a certain point (security/base submission), Isaac can say which are at the base (30/60/90 days waiting there, holding up new hires) vs. still in-house/occupational health, vacancies open and how long, why people didn't stick, etc.

Josh: Also want an accounting tie-in: knowing contract profitability — bid \$100K, tracking earn/loss based on compensation plans and where staffing stands, contract integrity over time.

Vincent(?): And whether money left on the table was a delay on our side vs. packets sitting at the base for 90 days.

Stephen: You painted a beautiful picture — think of NetSuite as a hub-and-spoke, sitting at the middle of your tech stack, integrating with Monday and Paycom to unlock that visibility. We're low on time — next step, assuming you're actively pursuing fixing these issues, would be staffing a solutions architect for deeper technical scoping to prepare a tailored demo (we're ~80% pre-configured out of the box per industry, 20% customization for your specific workflows). Are you open to a one-hour scoping/discovery session with the solutions architect — to nail down the right solution and give visibility into total cost of ownership, plus a curated live demo? Happy to come to San Antonio in person. Or are you more in research phase?

Josh: We're in research phase, but when something has a possibility of curing this stuff, research turns more investigative. I'd be willing to see what you guys can do to help.

Stephen: How else have you tried fixing these issues — other vendors, consulting with your MSP?

Josh: Been a lot of duct tape, honestly — everyone's grown into their roles. Haven't explored much. Tried changing payroll companies once or twice — thought we found something with Paylocity, they told us they did something that turned out not to be true, had to go back to Paycom, ended up breaking a contract — cost us a lot of money. Just trying to find a solution where everybody stays happy, doesn't feel like more work, and I get the info I need.

Stephen: Last question — are you keen on AI, or hesitant about what's under the hood?

Josh: As long as it's compliant with government requirements and no red flags, I'm totally cool with AI — that's where things are headed, might as well get on board now.

Stephen: We recently announced a \$7 billion Pentagon partnership — you're in good hands, secure there. Any final questions? We're at time.

Josh: I think we're good — if we could set up another call and get more granular, I'd appreciate it.

Stephen: Most definitely, we'll be in touch, send a follow-up recap email with helpful info/resources, and follow up once we staff the project with availabilities.

Josh: Sounds good — team, thank you for jumping on, and thank you guys at NetSuite for taking the call, we appreciate it.

BANT Summary (Internal)

Budget

Quoted range: \$40K–\$50K annual licensing + roughly equivalent one-time implementation cost (~\$80K–\$100K total year one).

Not confirmed/approved — Josh's reaction was cut off by connectivity issues; no explicit pushback, but no explicit buy-in either. Budget authority/sign-off still unconfirmed — needs follow-up.

Revenue context: \$85–90M this year, projected ~\$100M next year. 750–830 workers (W-2/1099), potential +100 from new awards. Company can plausibly absorb the spend, but no budget line has been discussed.

Authority

Joshua Graves (CEO/President/Owner) is the clear economic buyer and champion — personally initiated outreach via LinkedIn.

Strong buying committee already engaged: HR (Stacey), Recruitment (Shannon), Business Development (Vincent), Credentialing (Isaac Dave), Finance (David Tucker), Security/IT (Lee Metcalf), COO (Angela — invited but didn't attend, worth looping in next call).

No procurement gatekeeper or competing vendor evaluation mentioned.

Need

Strong, well-articulated pain: fragmented systems (QuickBooks + Monday.com + Paycom + heavy reliance on Excel), no single source of truth.

Specific, quantifiable pain point: need real-time visibility into candidate pipeline (recruitment → credentialing → security/base clearance → onboarding), tied to hard government compliance deadlines (30-day non-credentialed / 60-day credentialed hire windows).

Secondary need: tie contract-level labor cost/profitability tracking to accounting (bid amount vs. actual earn/spend by contract).

Fit looks strong: NetSuite as GL/hub integrating with existing Monday.com and Paycom (client wants to keep both, not replace) — fairly clean "phase one = financials + integrations" play, no complex inventory/fixed asset/PO requirements to build out.

Timeline

Explicitly stated as "research phase," but Josh noted research "turns more investigative" when something looks like it solves the problem — decent buying signal.

Urgency driver: new government contract awards ramping now through end of September (~100 additional workers expected), increasing pressure on the exact workflow problems discussed.

Immediate next step agreed: one-hour scoping/discovery session with a NetSuite Solutions Architect to build a tailored demo and TCO estimate — NetSuite to follow up once staffed, with a recap email in the meantime.

Suggested next action: Get the discovery call on the calendar quickly to capture momentum while the September contract ramp is fresh, and make sure Angela (COO) and Josh are both present given the cost conversation was cut short.

what were all the systems they were on? pull every name

Based on the transcript, USGP mentioned these specific systems/vendors:

QuickBooks Online – finance/accounting, current billing system

Monday.com – project management, candidate/recruitment tracking, hours tracking, CRM-style functionality

Paycom – HRIS, payroll, government reporting, workers' comp, FMLA tracking, compliance tracking (their current payroll provider)

Paylocity – a former payroll vendor they tried switching to; didn't deliver what was promised, so they had to break the contract (at real cost) and go back to Paycom

Excel – used extensively as the "glue" between all the above systems; described as "homegrown," a lot of manual spreadsheet work

Microsoft GCC (Government Community Cloud) – mentioned in passing as something they're "transitioning to" (Lee referenced it in the FedRAMP/CMMC discussion)

Two more were mentioned only as reference points, not systems they use:

ADP – mentioned by Stephen as one of the major payroll/HRIS providers NetSuite partners with (not a USGP system)

NetSuite – the system being pitched, and David Tucker mentioned prior exposure to it at a past employer (construction company), not at USGP

So their actual current stack is: QuickBooks Online + Monday.com + Paycom + Excel, with Paylocity as a failed past attempt and Microsoft GCC as an in-progress IT transition.
